## **DETAILED ACTION**

### ***Allowable Subject Matter***

The following is an examiner's statement of reasons for allowance: the closest prior art of record, i.e. U.S. Patent Application Publication No. US 2003/0076865A1 (Chang-Hasnain et. al.) which teaches (Figs.1-16) an optical semiconductor buffer device that uses electromagnetically induced transparency including plural quantum well layers and quantum dot layers used in conjunction and stacked with photonic band gap layers. Neither Chang-Hasnain et. al. or any of the other cited references of record teaches or suggests the claimed nonlinear optical and electro-optical material for optical signal processing which includes a set of quantum systems which are embedded into a frequency bandgap medium in order to develop a photonic passband. These limitations are recited in independent claims 1 and 3. Dependent claims 2 and 4-20 includes the limitations of the independent claims along with other additional limitations (See dependent claims for these specific limitations). Thus claims 1-20 are patentable over the teachings of Chand-Hasnain et. al. and all other listed references of record. Additional references are recited on PTO-892.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
